

Washed Stone

greater vancouver
aggregates division

▶ Navy Jack	A blend of washed sand and gravel in the proper proportions for small hand-batched concrete mixing. Available in 14mm & 20mm gradations.
14mm & 20mm Stone	Well graded, washed aggregate primarily used in the production of concrete. Also used in weeping tile drainage applications.
40mm Stone	Well graded, washed stone used in the production of concrete, for drainage, landscaping and as a roofing ballast
50mm Stone	A washed stone product primarily used in drainage, roofing, and landscaping.
Spawning Gravel	A clean mix of sands and various rounded stone sizes that simulate a natural creek bed. Used to enhance spawning areas, build new creeks, and to create a dry creek bed as a growing medium for native plant species.
Permeable Aggregate	This specialty product is a high quality, free draining base and sub-base material that allows water to freely drain. It is most commonly used in the construction of synthetic artificial turf sports fields.
25, 40, & 75mm Densification Stone	Installed in stone columns by professional contractors to increase the density of poor soil conditions.
75mm Filter Rock	Excellent for creating a filtering system in rip rap slope stabilization applications and to filter fines and debris in shallow creek beds.
Birdseye	Self-flowing, self-compacting, 10mm washed stone used in concrete, back-filled drainage, and architectural pre-cast products.
Exposed Stone	Screened, colourful rock, extracted from river deposits and used for exposed sidewalks, driveways and stucco applications.
